

Eliminate Engine Dusting Damage *Forever* with DustGuard™

The DustGuard™ System protects engines operating in severe environments from premature wear and catastrophic failure by warning operators and maintenance supervisors when inlet air is contaminated with abrasive particles. Don't wait for an oil analysis to tell you about an induction system leak... it might be too late to prevent engine damage.

Contact us today to learn more about how we can help improve fleet reliability, prevent unplanned maintenance costs and improve the bottom line.
